

What is server monitoring?

Server monitoring - it displays the current state of the server. By monitoring can find out whether the server, which now map, is there any players on the server, how many and exactly who is playing. The detailed statistics of the server can see the current server settings and get more information about the players.

To display detailed information about the server, simply click on its name or image of the current map.

You can find monitoring [here](#) .

How to help server monitoring?

If you see that we do not have pictures for some of the maps, you can send us a screenshot of the relevant [topic on the forum](#) .
